Quick Installation Guide X3-Matebox advanced

1. Introduction

X3-Matebox advanced is a critical part for energy storage system, which integrates the DC breaker/AC breaker/switch unit/Meter and so on, it can easily be installed compare to the traditional separate system, this unit can be used with Hybrid and Fit series inverters.

There are 2 wiring diagrams for your system connection reference, please follow your local policy to chose which one is suitable for your side.

Diagram A: N line and PE line separate wiring, M series inverters; (For most countries)

Diagram B: N line and PE line together, M series

2. Overview

1) Dimension and terminals of X3-Matebox advanced.

Object	Name	Description
A	PV	PV connection port (PVarray)
В	EPS(INV)/(Off-grid)	EPS output portof the inverter
С	Grid(INV)	Grid output portof the inverter
D	Grid	Gridconnection port (to local grid)
Ε	Load	Load connection port
F	BAT	Battery connection port(tobatterypack)
G	PV (INV)	PV connection port of the inverter
Н	Meter	Meter
	BAT(INV)	Battery connection port of the inverter
J	DC Switch	DC switch

Grid

3. Preparation

- Packing Lists

4. Mounting

Step 1: Bracket installation

Fasten the brackets to the wall, according to the following steps.

Note :When installing the bracket, be sure to use a spirit level to test and keep the bracket parallel to the horizontal plane.

Bracket A should be installed at a distance of 300mm (at least) from the ground.

Step 2: Screw the brackets on the wall

a) Use the bracket as a template to mark the two holes on the wall with a marker pen. Drill holes at marked spots with depth of 80 mm.

b) Insert expansion bolt into the hole, use rubber hammer to knock the expansion screw bolt into the wall.

c) The bracket is aligned with the screw uses the inner hexagonal wrench to screw the tapping screw until the expansion bolt "bang" is heard.

d) The Matebox should be prioritized over the installation of the inverter. Before installing the inverter, you need connect the ground wire and the Dongle communication accessories)

Step 3. Match the X3-Matebox advanced with the brackets

Use a level firstly to ensure that the brackets in the system are firmly installed and level. Then follow the steps below to hang X3-Matebox advanced.

Mount X3-Matebox advanced on brackets and tighten the screws. Open the upper cover and the isolation plate of X3-Matebox advanced before wiring.

5. Monitor the antenna connections of accessories

There is an antenna in the box of monitoring accessories. a) Install the antenna on the box and tighten it by hand; b) Then connect the antenna cable to the end of the pocket WiFi.

6.Wiring Connection

6.1 Inverter side connection_PV(INV)

According to the PV1(INV)+/PV1(INV)-/PV2(INV)+/PV2(INV)-/BAT(INV)+/BAT(INV)- line symbol on X3-Matebox advanced harness, the corresponding ports of PV 1+/PV1-/PV2+/PV2-/BAT+/BAT- of the inverter are successively inserted.

Note: 5.0 kw and 6.0kw M. series inverters have only two MPPT and two PV strings, so when connecting, you need to unplug (1/2) of the PV in the X3-Matebox advanced.

-Use a screwdriver to press down the yellow part while pulling the wire out of the port.

6.2 X3-Matebox advanced side connection

- Grid(INV) and EPS(INV)

1) Connect the Grid(INV) R/S/T/N and EPS (INV) R/S/T/N/PE ports of the inverter to the X3-Matebox advanced port. The connection method is as follows :

a) First, insert the R/S/T EPS(INV) into the R/S/T port of EPS (INV) in X3-Matebox advanced and the N EPS(INV) directly into the hole, directly into the hole and ensure that the installation is tight; b) Then find the Grid(INV) (R/S/T) port in X3-Matebox advanced, connect the corresponding wire harness, and lock the screw with a screwdriver.

C) Finally, lock the PE wire/N wire with a hexagonal keys;

3) Pass the PV line through the PV port of the X3-Matebox advanced, and then find PV(PV1+/PV1-/PV2+/PV2+) inside the X3-Matebox advanced. Force the wire harness directly into the hole to jam, gently twist not to loosen.

* Note: For 5.0 kw and 6.0 kw M series, there is only one PV1 line, and PV1+/PV1corresponds to any pair of PV1+/PV1- ports on X3-Matebox advanced.

4) Pass the Grid/Load line through the Grid/Load port of the X3-Matebox advanced, then find the Grid(R/S/T/N) port and Load (R/S/T/N) ports in the X3-Matebox advanced, insert each line, and use the screwdriver to lock the screws.

5) Pass the battery power wire through the BAT port of The X3-Matebox advanced, then find the BAT+ and BAT- ports in the X3-Matebox advanced, insert each wire accordingly, and use the screwdriver to lock the screws.

-If the user requires wiring rules for neutral wires the standby power supply cannot be isolated or switched (for wiring Australia and New Zealand regulations AS/NZS_3000:2012)

Π

Note: According to the different N terminals of Grid(INV), select the corresponding connection position.(if need:(A + 6.4B) or (I + 6.4II))

- PV and Grid and Load and Battery

2) PV(PV1+/PV1-/PV2+/PV2-) /Grid(R/S/T/N/PE) /Load(R/S/T/N) side connection a) Prepare ordinary 4mm² PV(PV1+/PV1-/PV2+/PV2-) /10mm² Grid(R/S/T/N/PE) /10mm² Load(R/S/T/N) remove the 12mm insulation layer at the end of the wire. Insert the European-style terminals respectively.

The stripped terminals must be inserted into the European-style terminals and finally pressed down with the crimping pliers.

b) Grid(PE) strip the grounding cable insulation(length"L"), insert the stripped cable into the R type terminal, and then clamp it.

6.5 Finally, use the screwdriver to install the baffle back, close the upper cover and lock the buckle by hand.
